# **WEATHER OF CONCERN**

## **Weather of Concern**

### **Southern California**

- A warm and moist Pacific storm system will affect southwestern California this weekend. Rain is expected to spread across the region through the day on Saturday. Light to moderate rain will cover much of the region Saturday night and Sunday morning before tapering to showers Sunday afternoon.
- It looks like there is the potential for local heavy rain at times especially along south-facing slopes. Snow levels will be high, near or above 8,000 feet.
- Gusty south to southeast winds are expected at times mainly over portions of San Luis Obispo and Santa Barbara Counties as well as the mountains of Ventura and Los Angeles Counties.
- Potential impacts will include a small chance of mud and debris flows in and below recent burn areas, slick roadways, and urban and small stream flooding.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

The wet unsettled weather pattern will continue for the next week and beyond. Snow levels will remain about the same Friday and Friday night as the showers diminish. Another Pacific low pressure system will target Central CA Saturday and Sunday. Scattered rain showers will spread over the southern half of the Northern California region. The remainder of the region will be partly cloudy with above normal temperatures. High pressure moving overhead on Monday will bring partly cloudy and warmer than normal conditions region-wide. A few mountain showers may linger from the weekend system.

A stronger system will arrive on Tuesday. S-SW winds and clouds will increase during the day, and the first wave of precipitation will move onshore by midday. Snow levels will initially be above 6000 ft, but they will drop to 2000-4000 ft on Wednesday as colder air moves in. Wet unsettled weather from this system will likely persist through the end of the week.

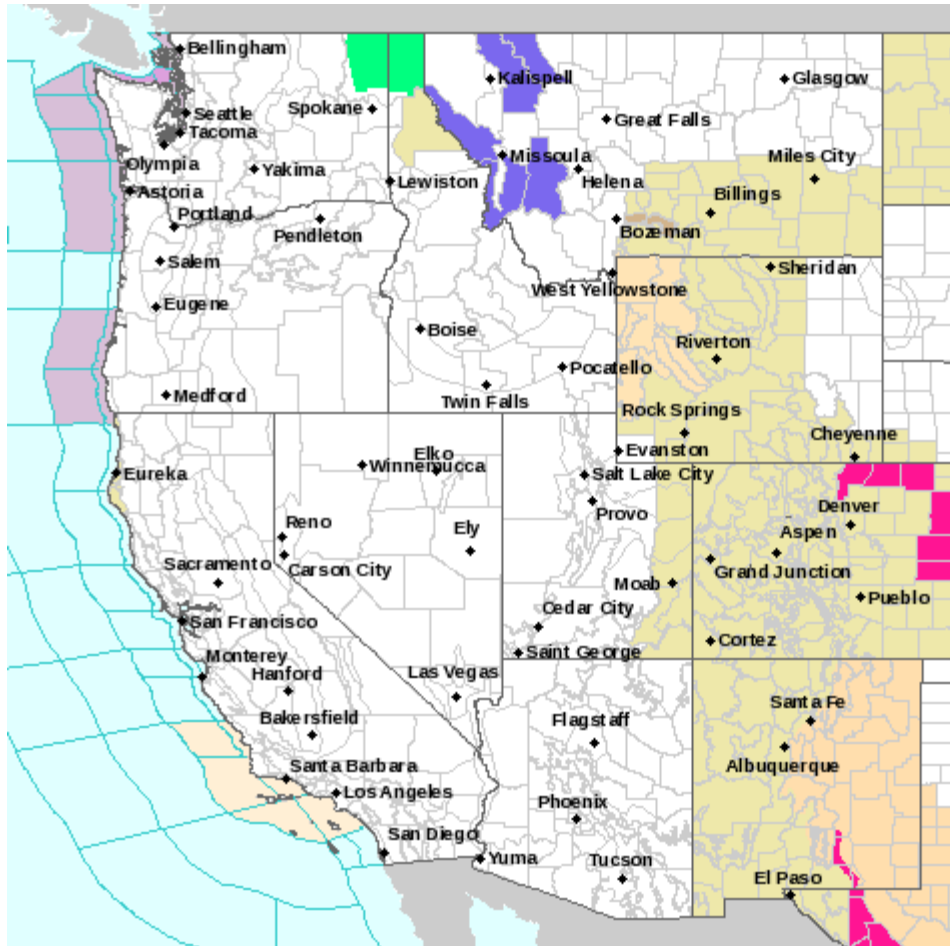

## **SOUTHERN CALIFORNIA**

Zonal flow will bring near normal temperatures and high humidity to the region Friday through this weekend. A weak disturbance coming in from the southwest will bring scattered showers to Central California Friday with less than a quarter inch of rainfall. This disturbance will also bring westerly winds of 20 to 30 mph with gusts to 50 mph to the wind prone mountain and desert areas Friday. A stronger disturbance coming from the southwest will bring showers to the entire region Saturday afternoon through Sunday afternoon. With this disturbance, most foothill and mountain locations will receive between 1 and 3 inches of rainfall and most coastal and valley locations will receive between a quarter inch and an inch of rainfall. A weak ridge of high pressure will bring a few degrees of warming and a little lower humidity to the area early next week. A potential strong storm may bring significant rainfall along with strong southerly winds and below normal temperatures Wednesday through the end of next week.
